ADA Compliant Ramps Americans with Disabilities Act Accessibility Guidelines

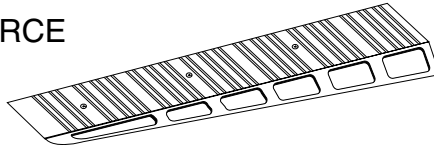

(ADAAG) - 1998 and ICC/ANSI A117.1 - 1998 Accessible and Usable Buildings or Facilities require that:

- Thresholds above 1/4" must be beveled with a slope no greater than 1:2
- Maximum Threshold Height = 1/2"
- Height changes over 1/2" require use of a ramp with slope not steeper than 1:12
- The maximum rise for any ramp run shall be 30 inches maximum

NGP offers a complete line of Aluminum and Rubber Ramps, which comply with the slope and run required by ADAAG and ICC/ANSI A117.1

Our Aluminum ramps are available to either butt against the

RCE

change in floor elevation or overlap the offset. They are furnished in sections allowing the total height to range between 1/2" and 2-1/2", in 1/4" increments. These ramps have the option of being used with our cast aluminum Return Closed Ends, which neatly close off the sides. We recommend our non-slip "SIA" (Slick-It-Ain't) finish be applied whenever ramps are used in an exterior or potentially wet location. All NGP aluminum ramps are BHMA Certified to ANSI A156.21 standard.

Rubber Ramps have the added features of flexing to conform to irregular floor surfaces, easily being cut in the field, and fastened with adhesive rather than screws. NGP rubber ramps have a fluted surface for maximum traction, and come standard with beveled ends, making separate miter ends unnecessary. Rubber ramps are available in 1/2" and 1" height, and may be interlocked with our aluminum ramps if higher than 1" is required. NGP offers a specially formulated Black Silicone Adhesive designed for mounting our rubber ramps.

Special Custom-Fabricated Ramps in Aluminum, Brass or Stainless Steel can be designed and manufactured to meet special conditions and finish requirements. Just call or Fax our Technical Dept. with the details.

Spec Rite is designed as a vehicle to provide information to Architects and Specification Writers to make them better informed and to make their job easier.
